

# **Innovation Complementarities, Management Quality and Export Composition**

W. F. Maloney  
Research Department, World Bank  
Ankara, December 2013

<https://openknowledge.worldbank.org/handle/10986/9371>

# Ancient Latin American Growth Mystery I: Same Good, Different Outcomes

# Ancient LA Growth Mystery II: Same Business Climate, Different Outcomes

## Percentage of Firms Managed by Immigrants

Country	Year	% Immigrant Directors/Owners
Argentina	1900	80
Chile	1880	70
Colombia (Baranquilla)	1888	60
Mexico	1935	50

Source: Maloney 2013

# Structure of the Presentation

- Part I: Export Composition: is this the missing ingredient?
- Part II: Innovation: the critical agenda
- Part III: Management quality as a missing complement

Export Composition-is this the  
critical ingredient?

# Why might standard price signals be deceptive in choosing goods

- Marshallian externalities related to goods
  - local industry-level knowledge spillovers, input-output linkages, and labor pooling.
- Volatility externalities: Export diversification?
- Intervention warranted to shift to good with externalities against price signals.

# Empirical concerns of policy makers about export composition

1. Yes, Externalities dictate that market will not generate optimal basket
2. How do we measure these externalities?
3. Doesn't the whole world see the same benefit and drive the price down? (GE)
  - Interindustry spillovers, assymetries
  - Should we look for safe rents, too? Natural Resources
  - More generally, must think of demand side as well
4. Do externalities necessarily come with a good, or does it matter how we produce it?
  - Heterogeneity, Heterogeneity, Heterogeneity

# In practice, measurement of MEs is difficult, so we take shortcuts

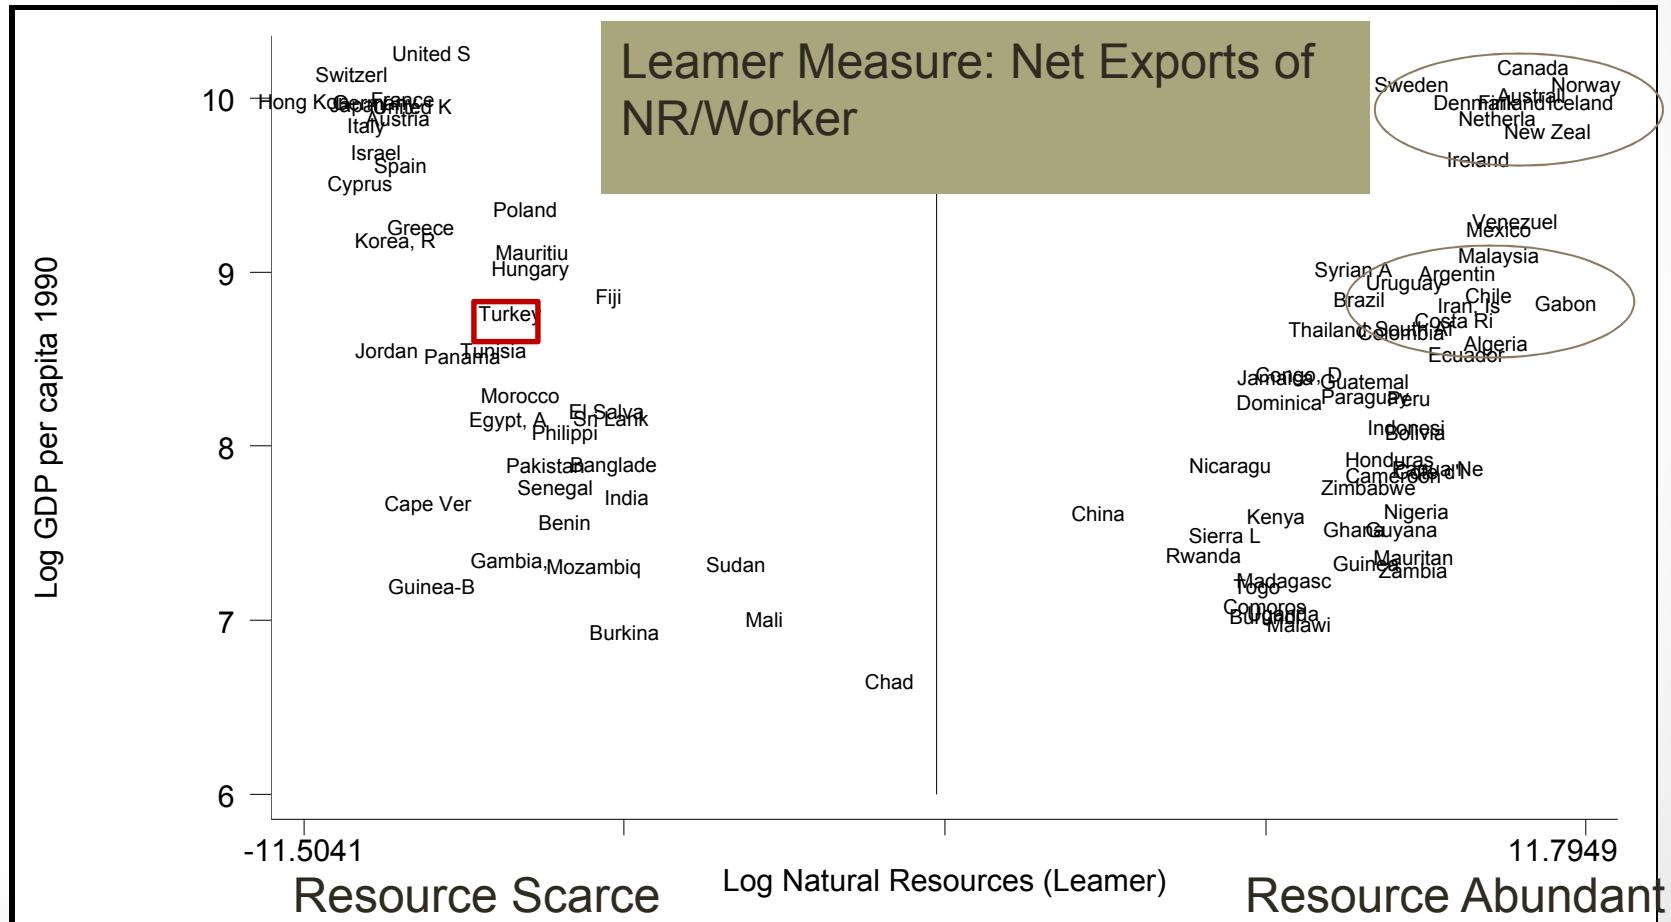

- Natural resources
  - Low productivity (Smith, Matsuyama, Sachs), few Externalities
  - Rent seeking
- High productivity goods
  - Rich Country Goods (Rodrik, Hausmann)
  - High tech (Lall) high inter-industry MEs

# CURSED GOODS: NATURAL RESOURCES

# Empirically, there is no resource curse

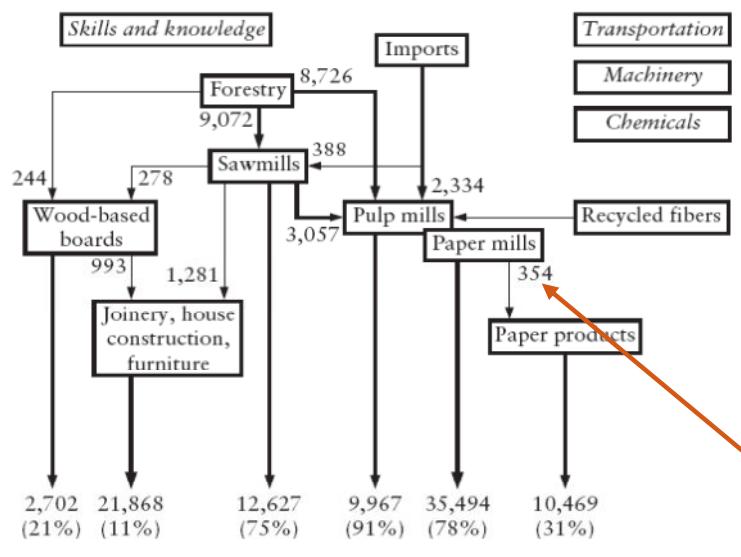

- In growth regressions
  - Minerals are good: Davis (1995), Sala-i-Martin et al. (2004), Stijns (2005), Brunschweiler (2008, 2009)
  - Conditional on education (above 2 years of schooling): Bravo-Ortega & De Gregorio (2007)
  - Existing resource curse findings fragile: Lederman & Maloney (2007, 2008)
  - [Also, Jacob Viner and Douglass North years ago...]

# There is lots of heterogeneity in experiences with NR

Trees can be very high tech!  
Innovation policy is key

## Nokia: Site of an early pulp mill in Finland

## Learn how to learn

# HIGH PRODUCTIVITY GOODS

# Does It Matter What We Export?

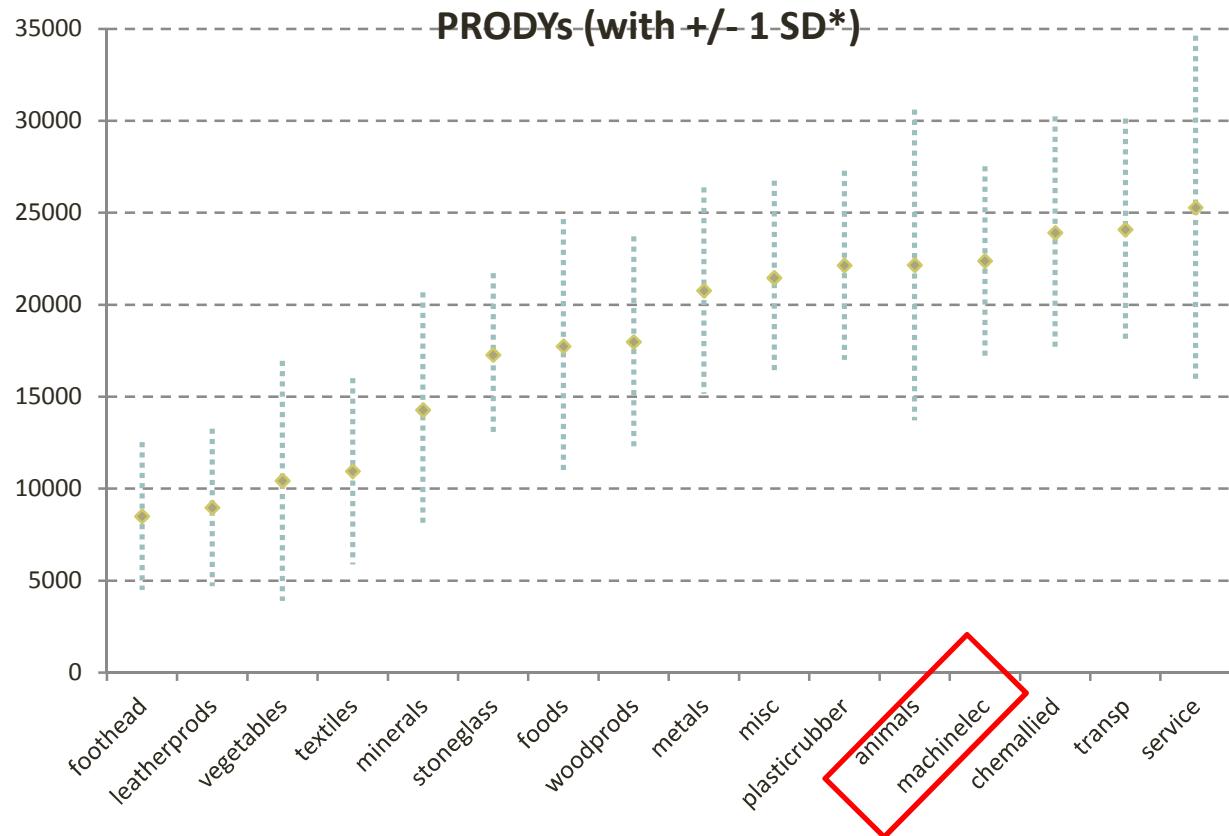

## Hausmann, Hwang, Rodrik (2007)

- Model- broadly inter-industry spillover
  - Country should produce the highest productivity good *within its CA*
- Empirics:
  - PRODY= avg. income of countries producing good
  - EXPY= income value of our export basket
  - Similar to Lall (2000)
  - Find higher EXPY correlated with higher growth.

# Caveats

- GE critique again?
- Rents- higher where rich countries already are?
  - Not generally the case- Nokia and TVs
  - If easy to move into these goods, then barriers to entry/rents low
- Empirical findings muddy
  - Animals, electrical machinery same PRODY

# Again, high degree of heterogeneity

# Caveats

- GE critique again?
- Rents- higher where rich countries already are?
  - Not generally the case- Nokia and TVs
  - If easy to move into these goods, then barriers to entry/rents low
- Empirical findings muddy
  - Animals, electrical machinery same PRODY
  - Finding of an impact on growth fragile

# Empirically, some support for MODEL

# 1b. A digression on Monkeys

- Being a tree in a dense area is like a ME with same GE concerns
- If easy to jump from one tree to others, then easy to jump to, i.e, no barriers to entry and rents
- Is past a good predictor?
  - iPhone didn't exist, Saab already does
  - Would Chilean forestry produce Saab?

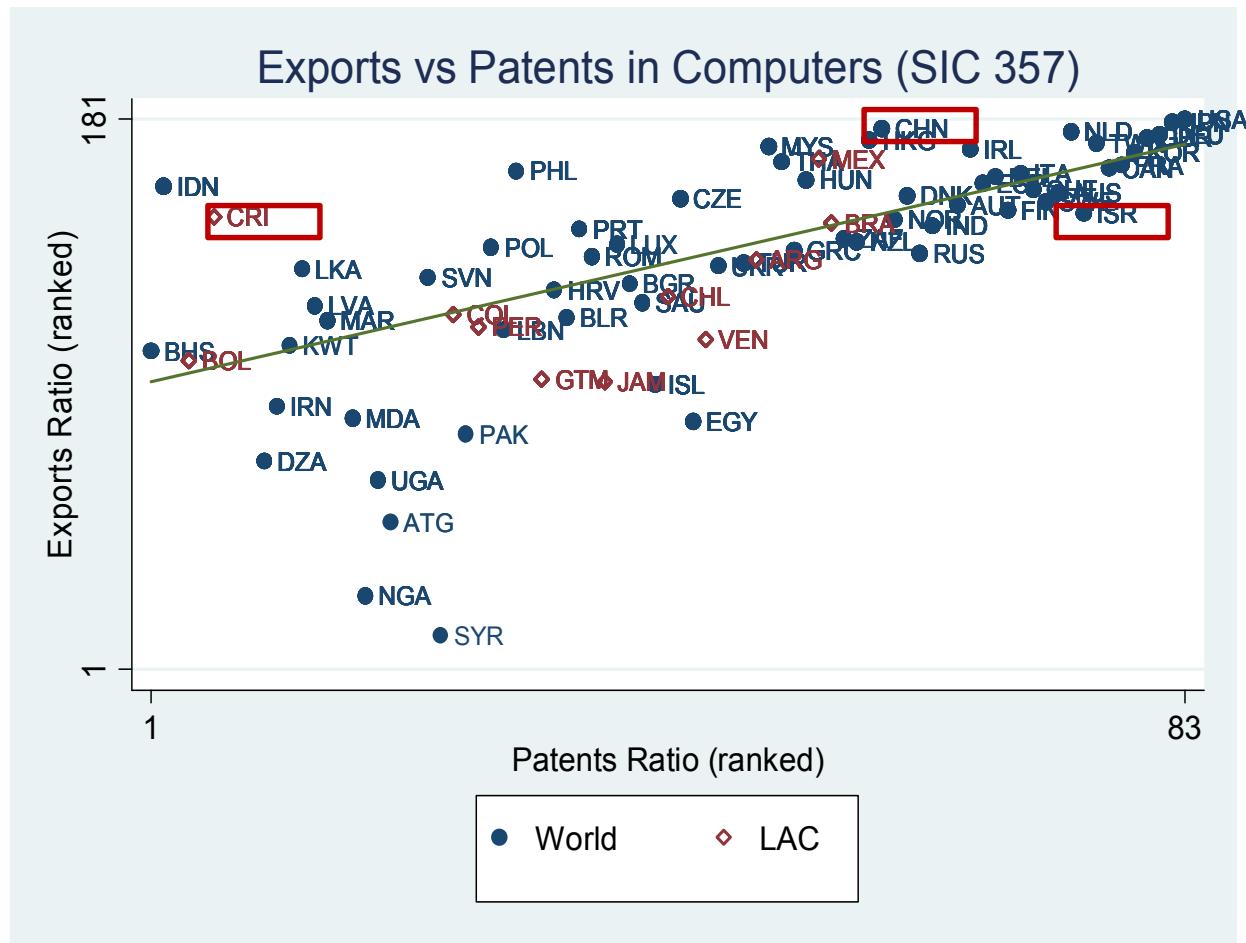

IS IT WHAT WE PRODUCE, OR HOW?  
BEYOND GOODS

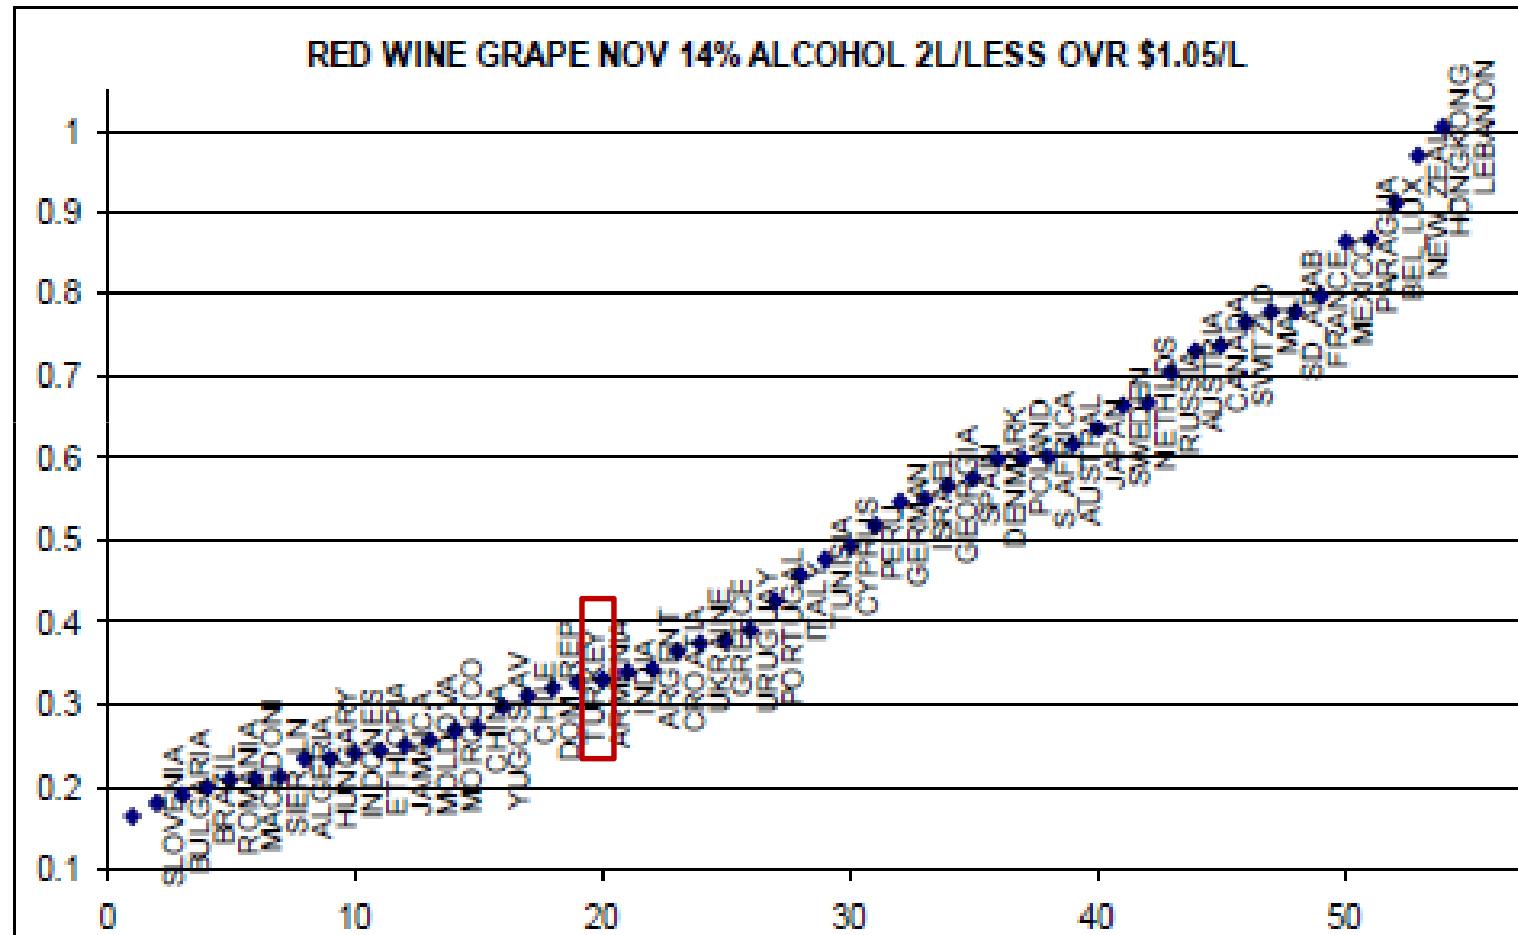

# Is High Tech Necessarily High Tech?

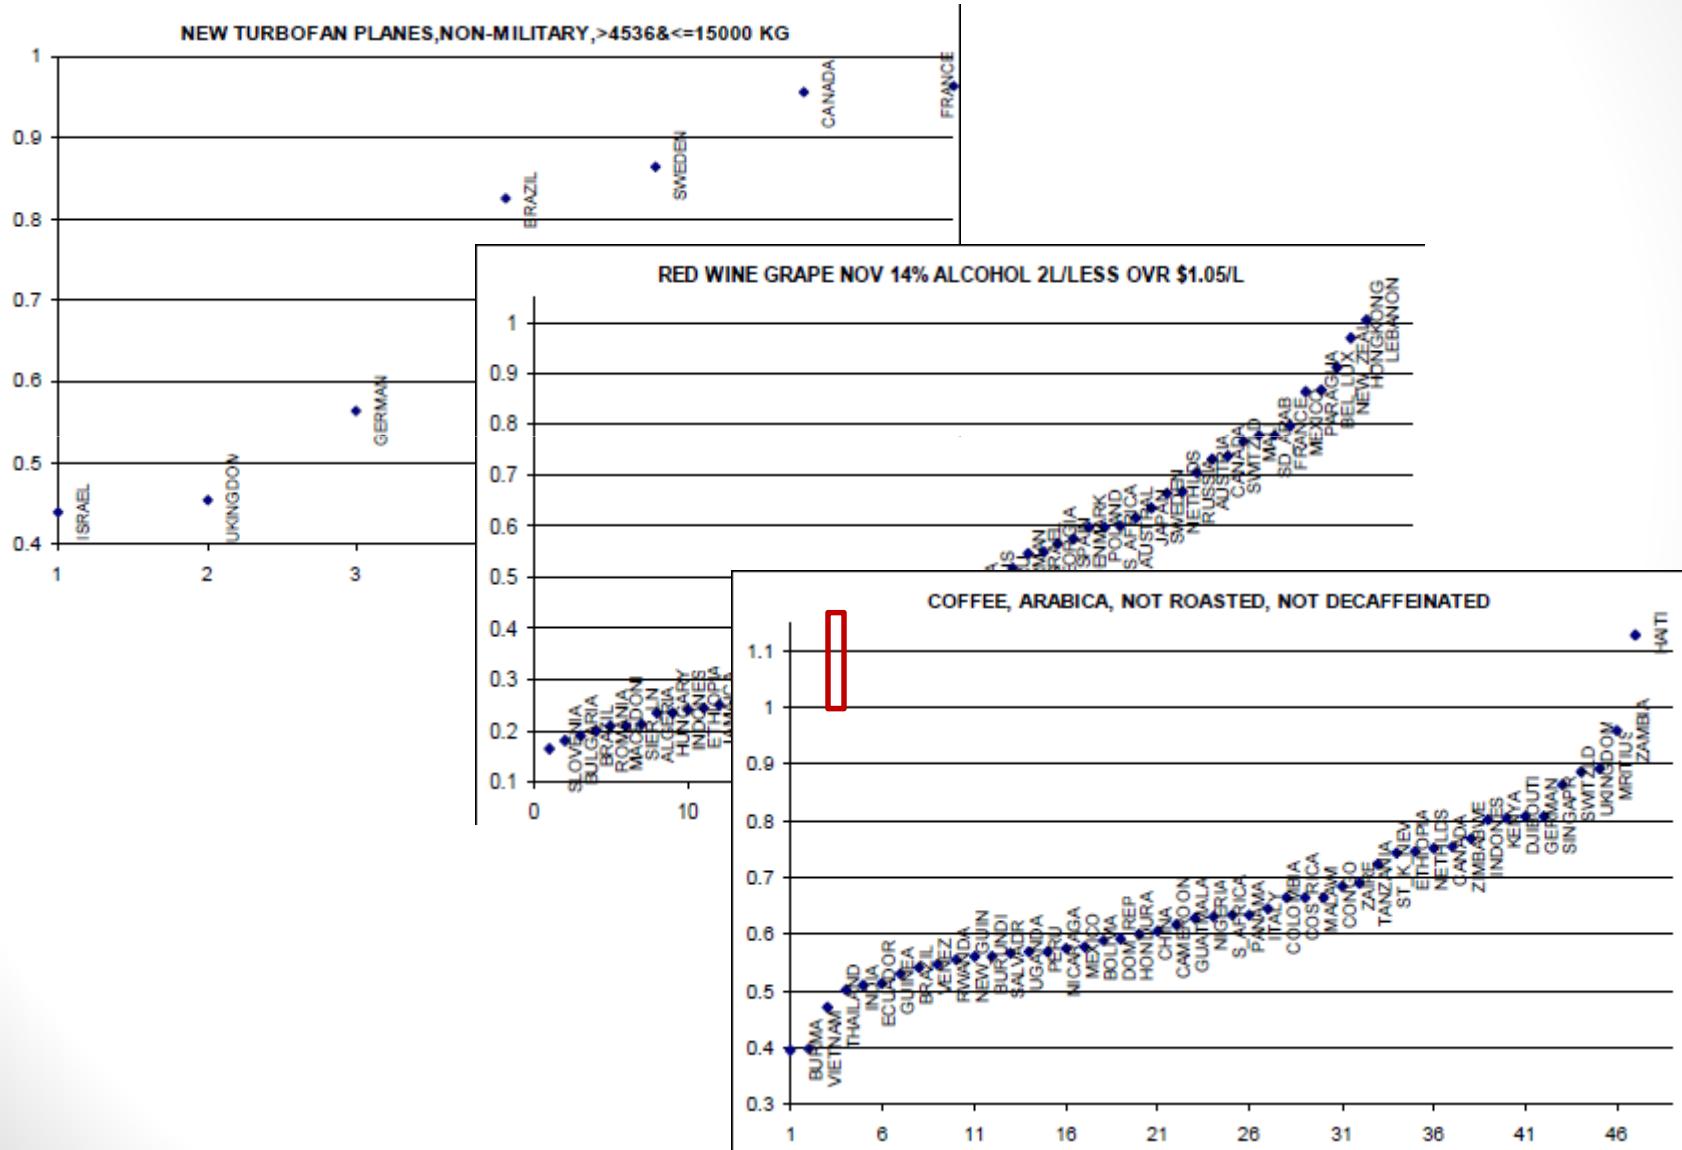

Fuente: Lederman and Maloney (2012)

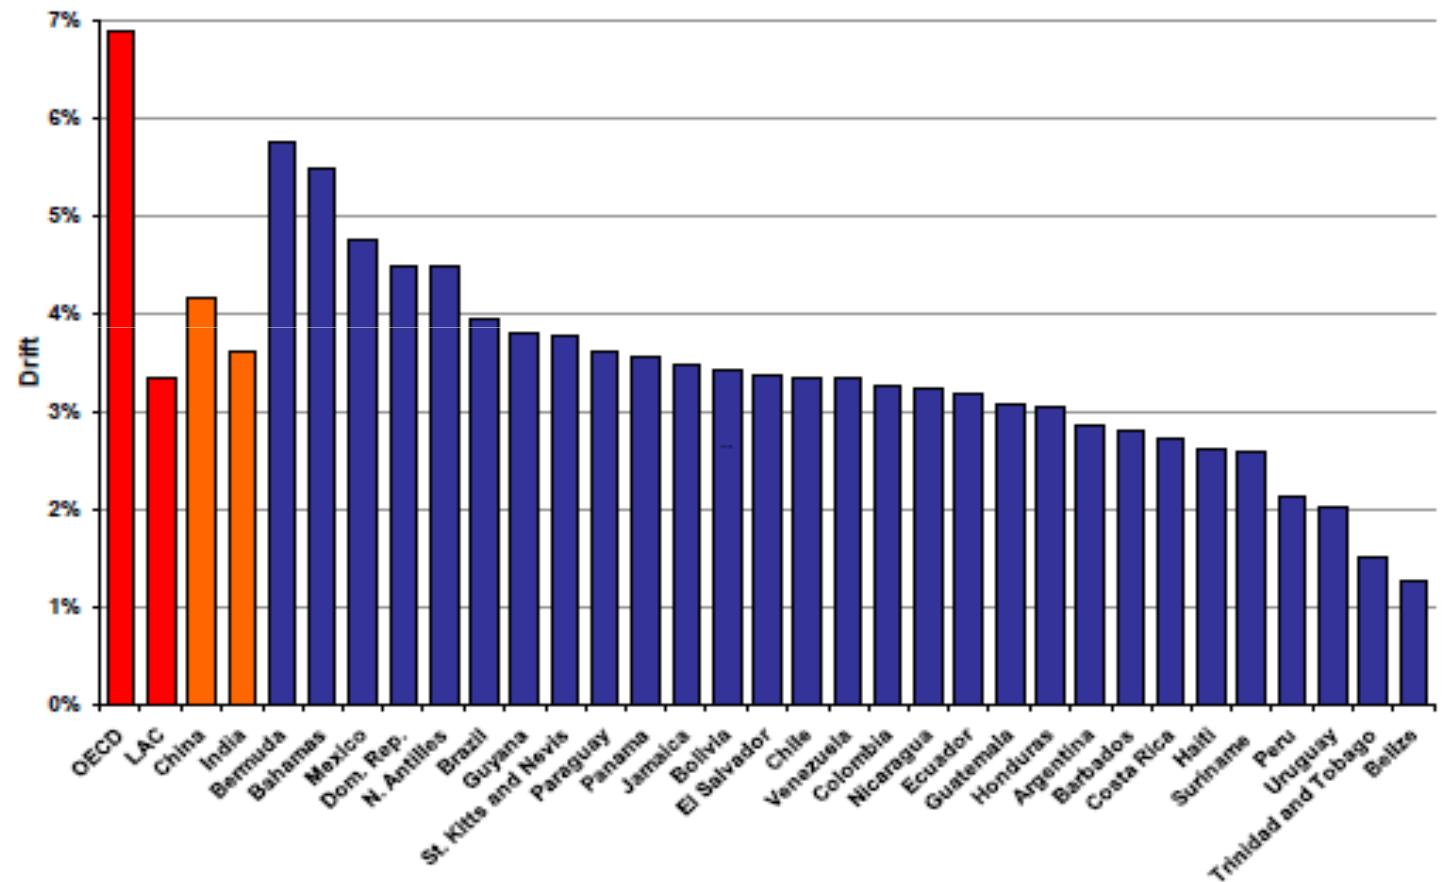

# Heterogeneity in product quality is also huge (relative unit values, standardized)

# Quality ladders by product and countries (relative unit values, standardized)

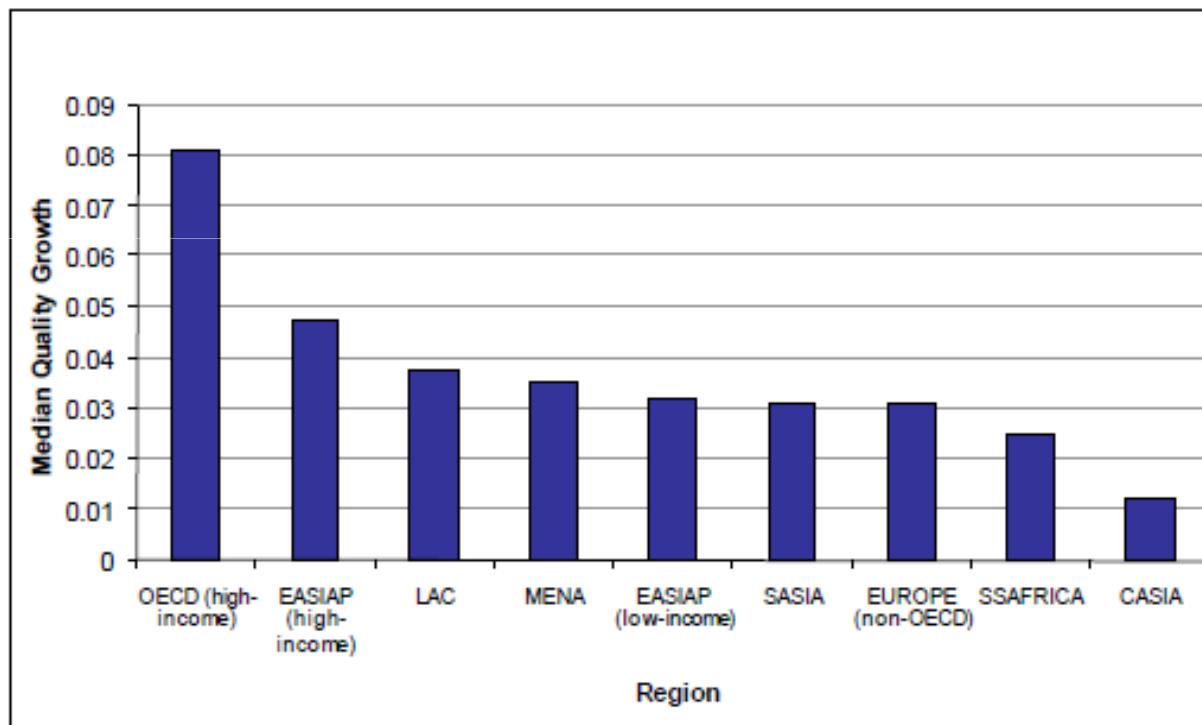

# Export Quality Growth

Krishna and Maloney 2011

GOODS OR TASKS

# Goods or Tasks: Does China really export the iPOD?

**Table 2 China: 10 Exports with the Lowest Domestic Value Added**

Electronic computer	4.6
Telecommunication equipment	14.9
Cultural and office equipment	19.1
Other computer peripheral equipment	19.7
Electronic element and device	22.2
Radio, television, and communication equipment	35.5
Household electric appliances	37.2
Plastic products	37.4
Generators	39.6
Instruments, meters and other measuring equipment	42.2

**China: 10 Exports with the Highest Domestic Value Added**

Agriculture, forestry, animal husbandry and fishing machinery	81.8
Hemp textiles	82.7
Metalworking machinery	83.4
Steel pressing	83.4
Pottery, china and earthenware	83.4
Chemical fertilizers	84.0
Fireproof materials	84.7
Cement, lime and plaster	86.4
Other non-metallic mineral products	86.4
Coking	91.6

“..the electronic components we make in Singapore require less skill than that required by barbers or cooks, involving mostly repetitive manual operations”

Goh Keng Swee, Minister of Finance Singapore (1972)

# Innovation: The Critical Agenda

# Weak innovative capacity meant LA missed the 2nd Industrial Revolution

Source: Maloney y Valencia (2013)

# Current literature focusing on R&D is not credible...

Estimated returns to R&D are very high...

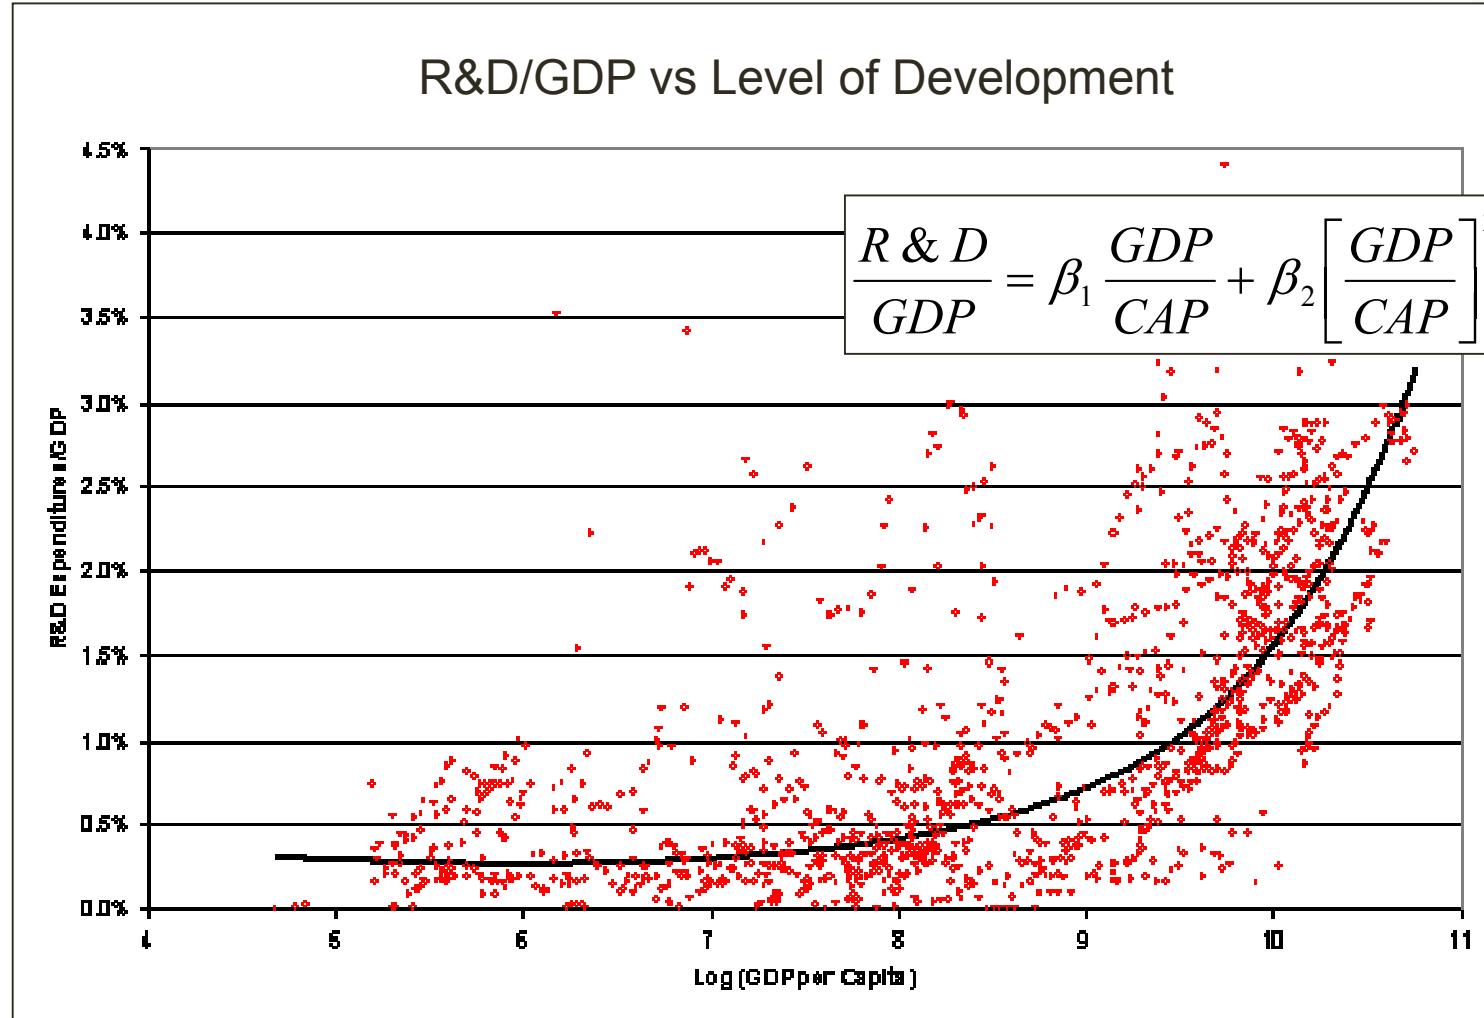

- ▶ US firm level/industry data- social returns
  - ▶ Griliches and Lichtenberg (1984) 71%
  - ▶ Terleckyj 1980, Scherer (1982 ) >100%
  - ▶ Griffith, Redding, Van Reenen (2004) 57%
  - ▶ Jones and Williams (1998) 28%
- ▶ X country
  - ▶ Coe and Helpman (1995) G7 123%
  - ▶ Van Pottelsberghe and Lichtenberg (2001) G7 68%
- ▶ ...And imply social rates of return far above private
  - ▶ Jones and Williams (1998): US should quadruple investment in RD

# ...and get higher with distance from the frontier

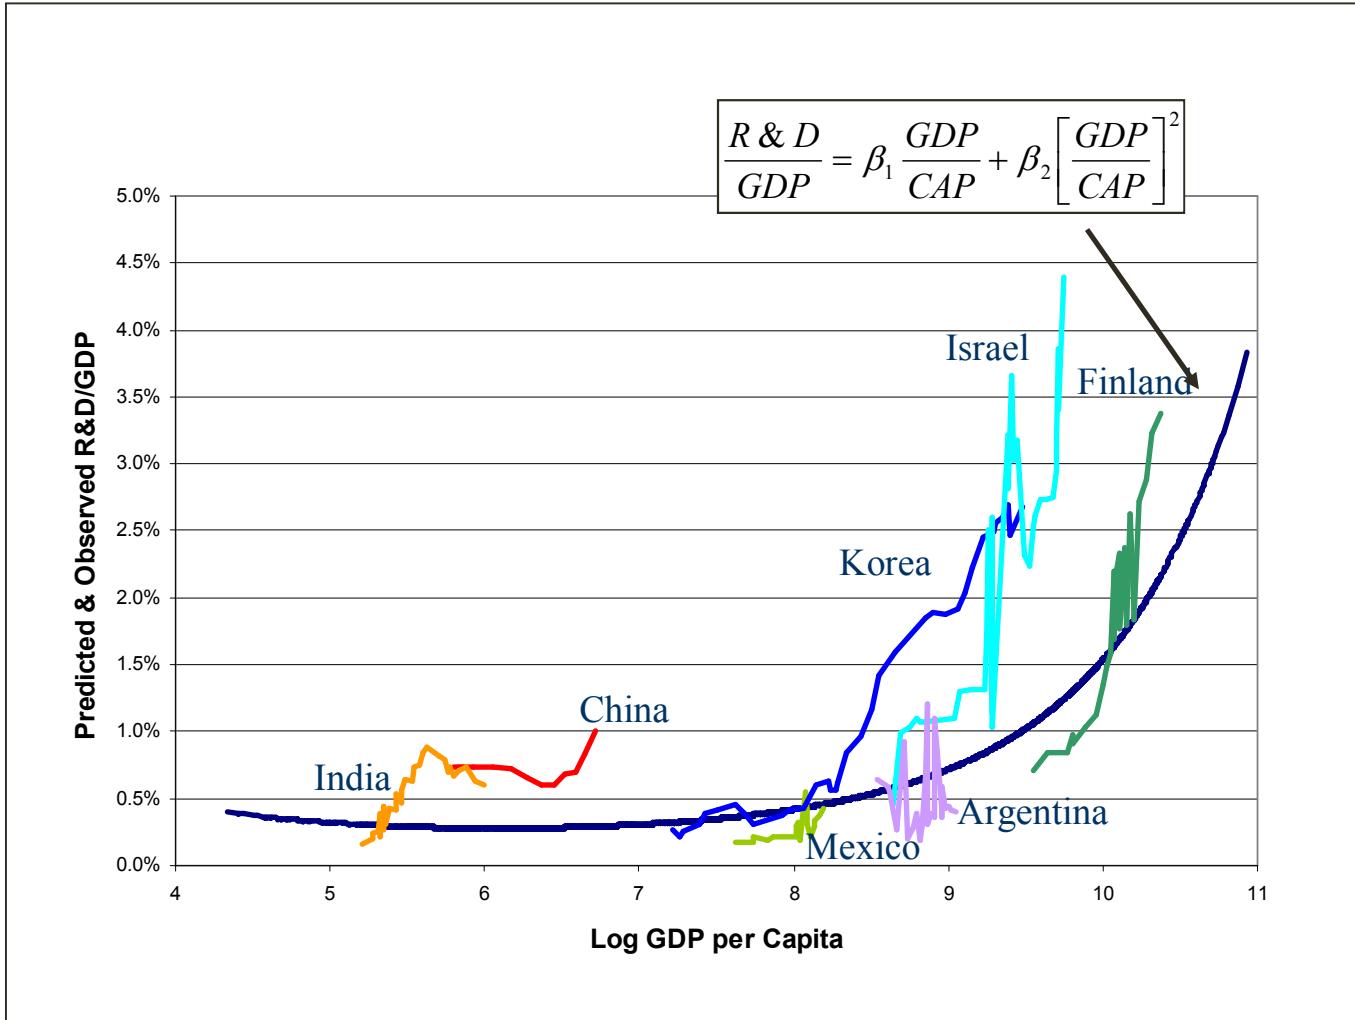

- ▶ Two Faces of R&D (Cohen and Levinthal 1989)
  - ▶ Invention
  - ▶ Learning\Catch-up
  - ▶ Poor countries should have much greater returns
- ▶ Griffith, Redding, Van Reenen (2004)

	Dist. Frontier	RoR R&D
▶ USA	-.18	57%
▶ UK	-.53	77%
▶ Italy	-.73	88%
- ▶ What should the rate of return be for Korea (-1.33), Malaysia (-2.28), Turkey (-2.5), Indonesia (-3.74)? 200%? 300%?

# But poor countries do generally less R&D than rich countries...Why?

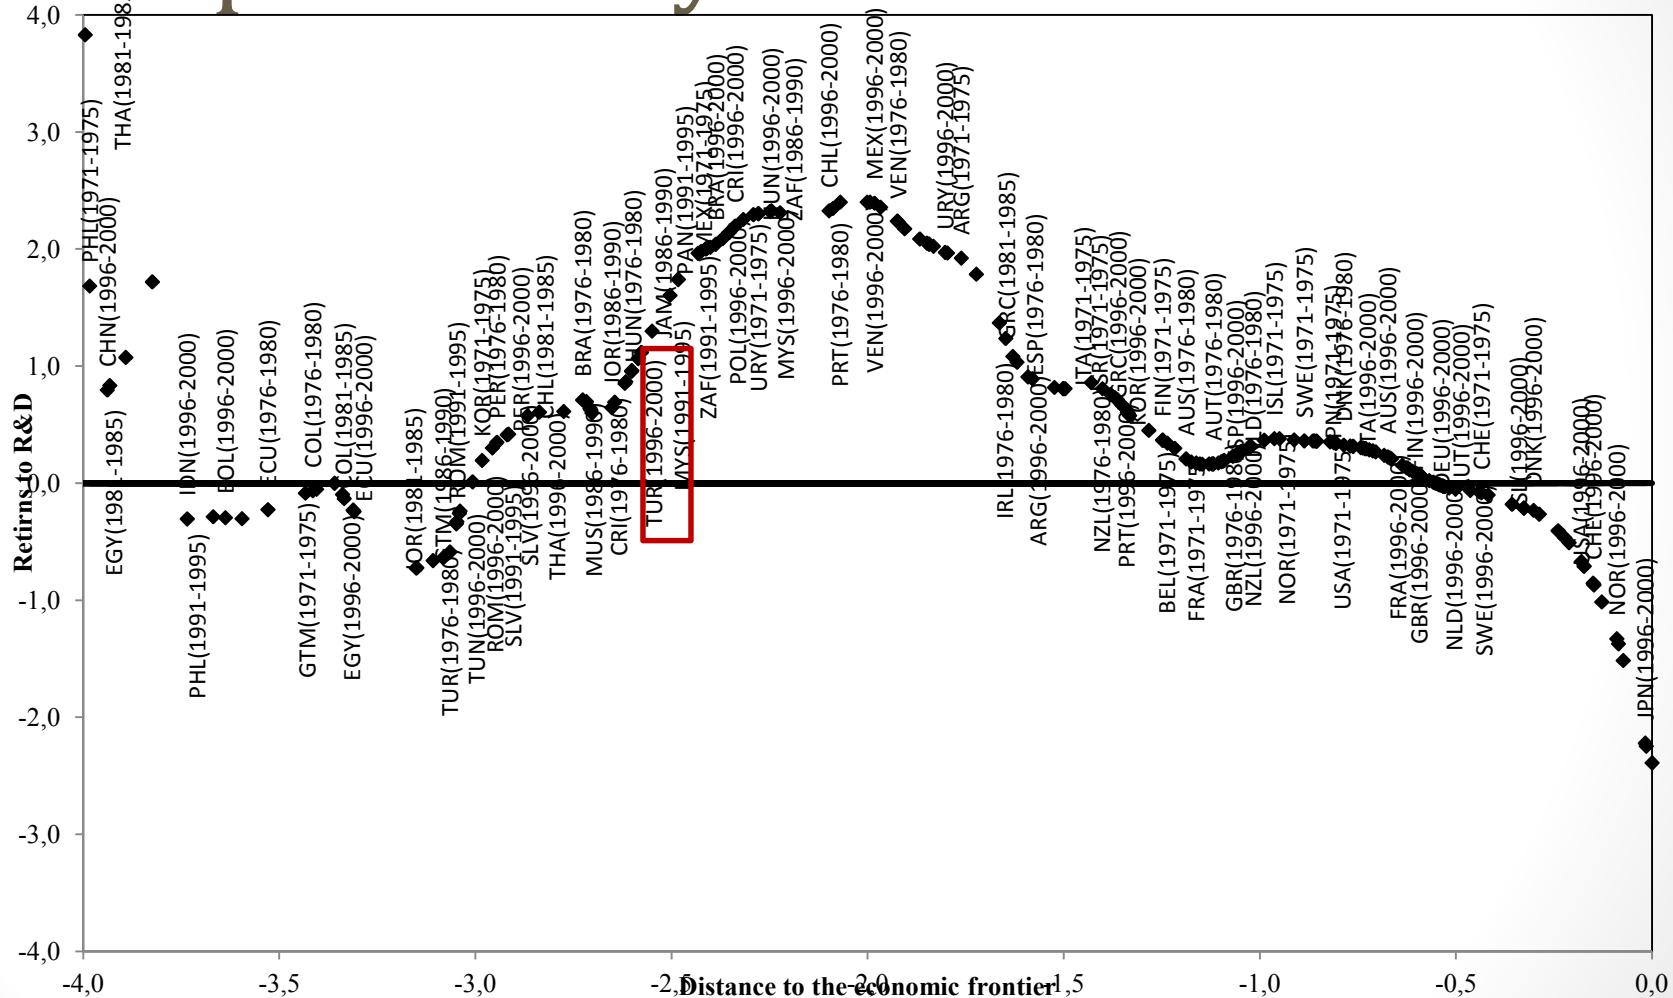

# Innovation Superstars?

# Perceived Quality of Research Institutions

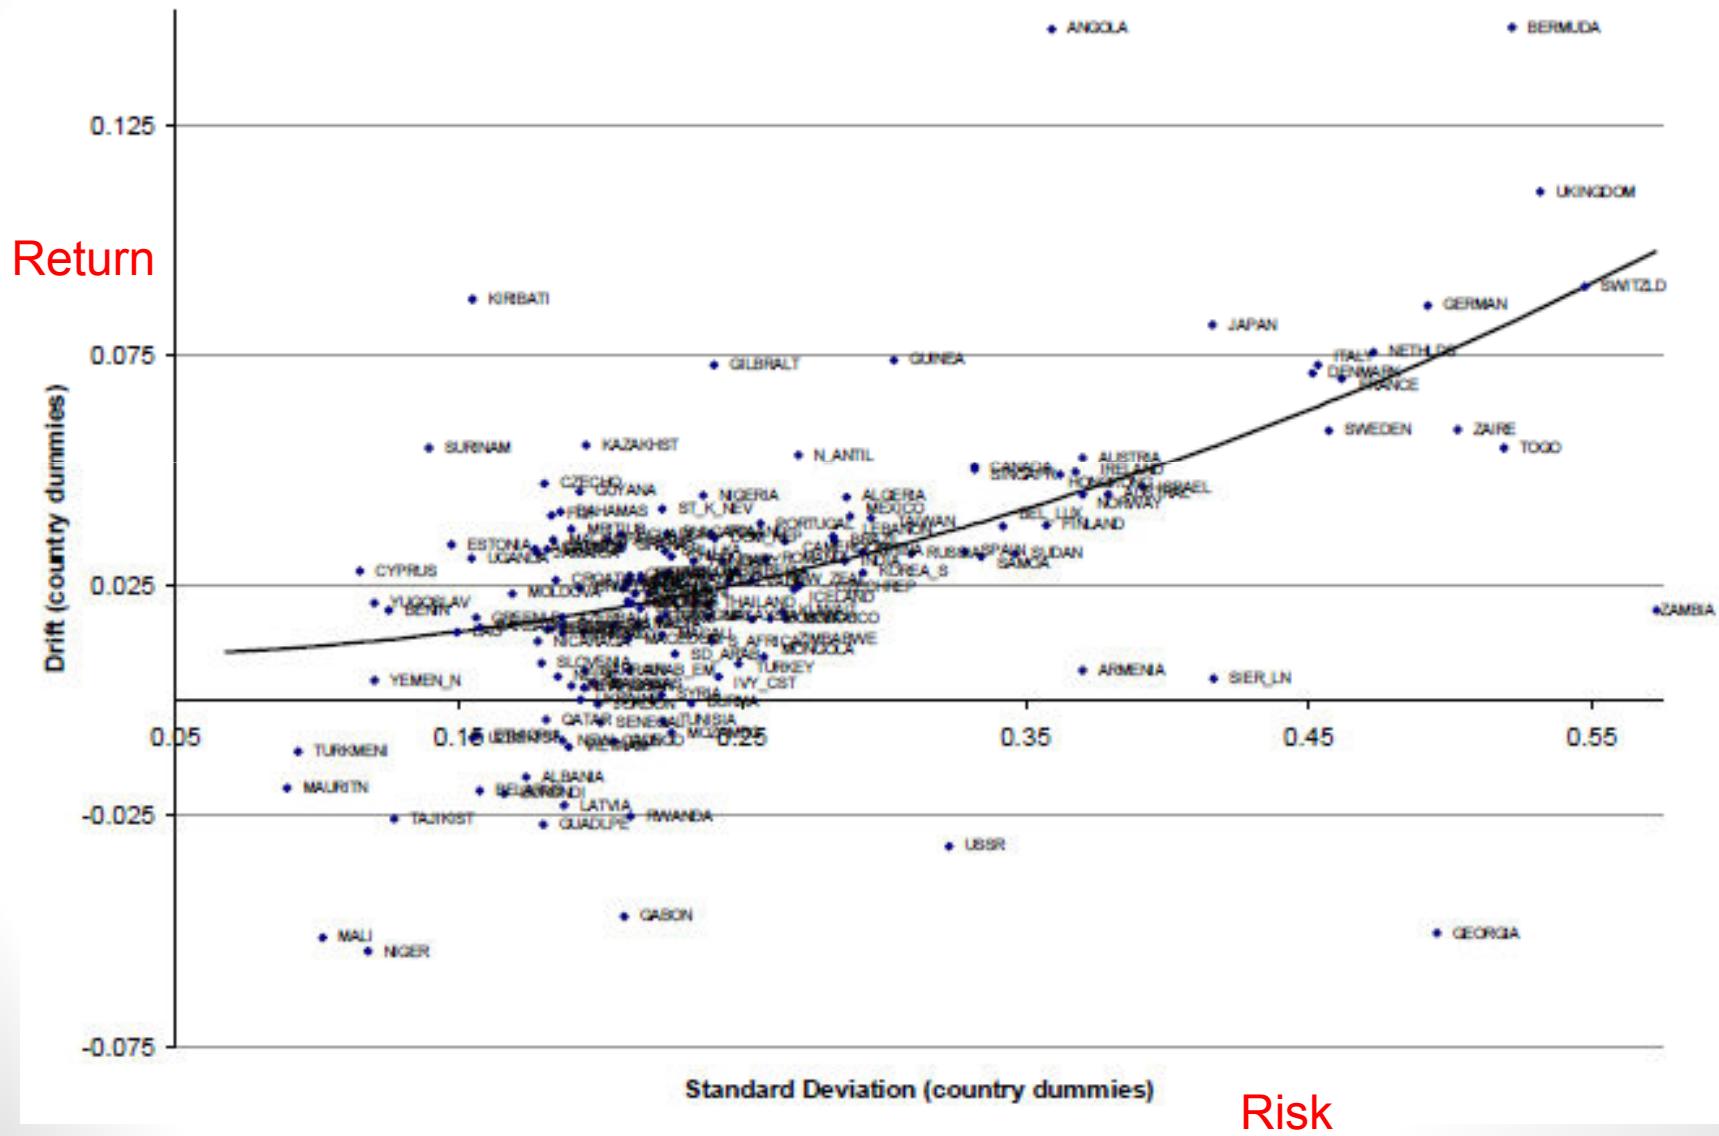

# University-Industry Collaboration

# Business Share in R&D

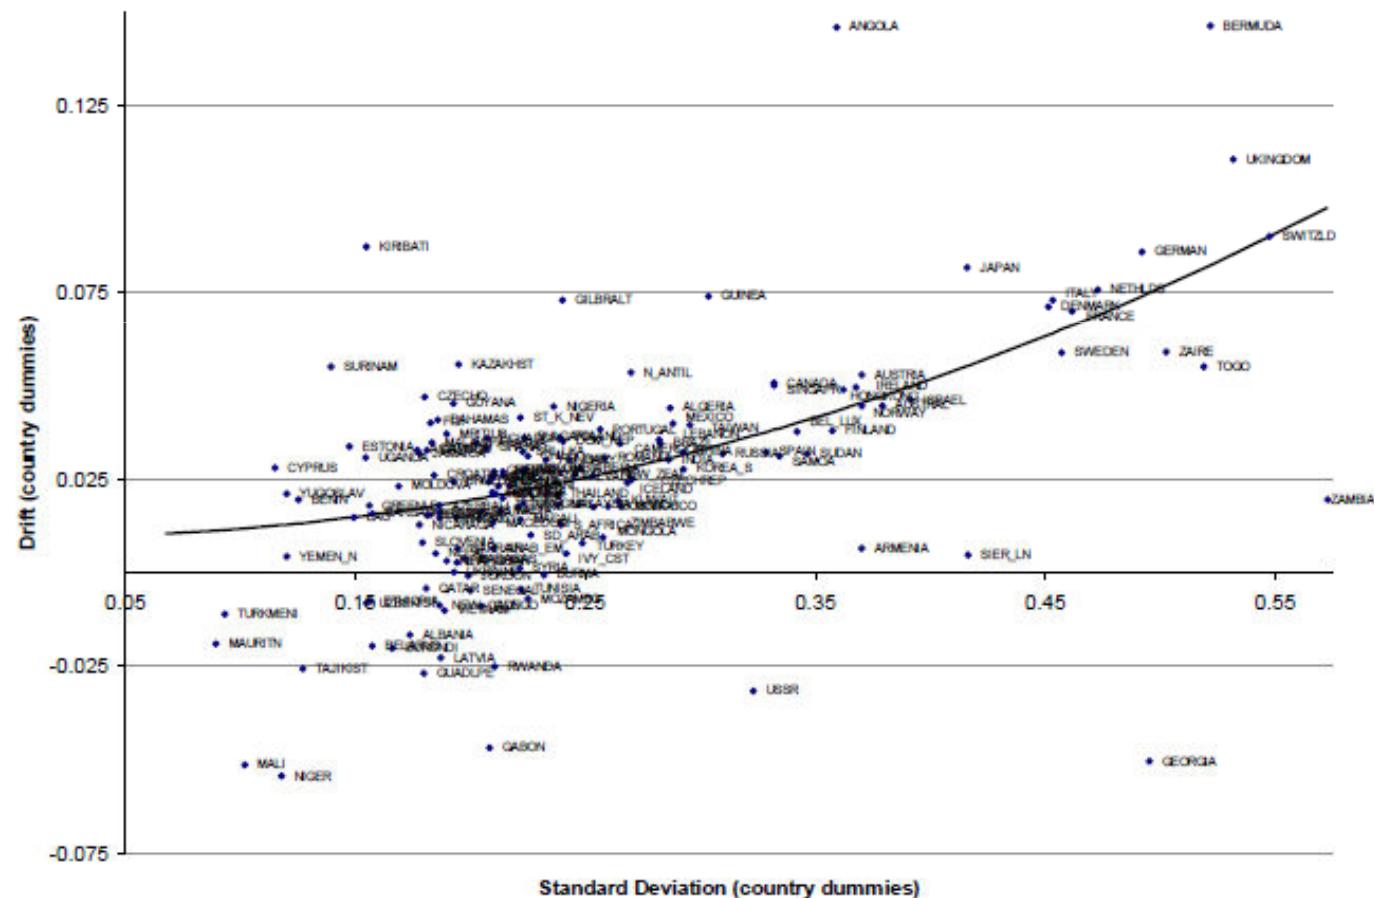

# Managing Risky Ventures

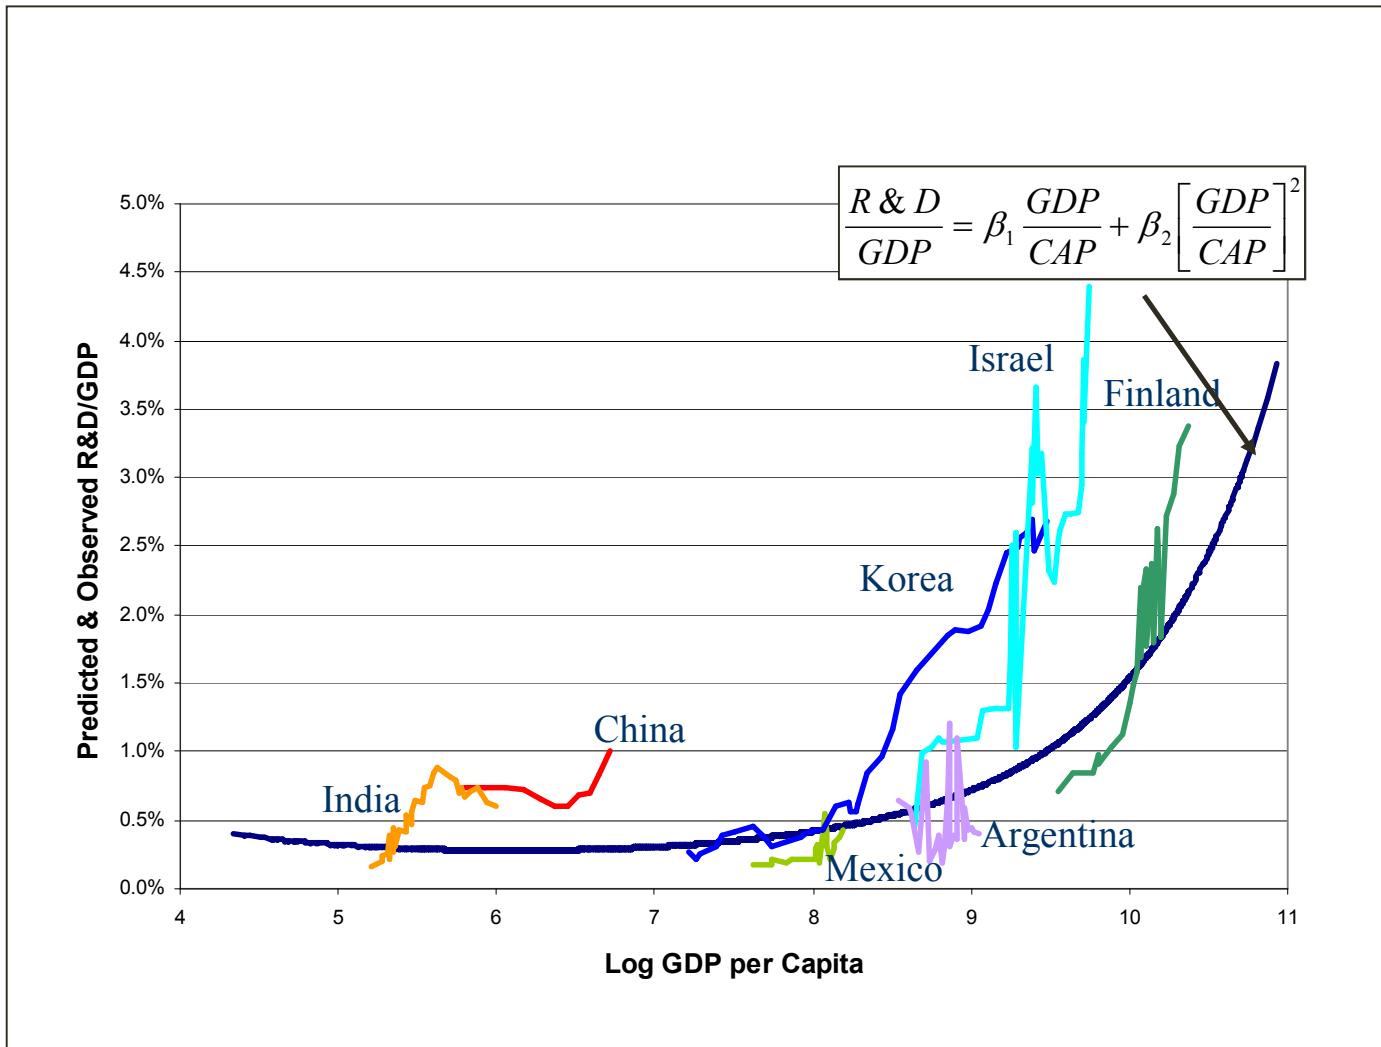

# Ability to manage risk

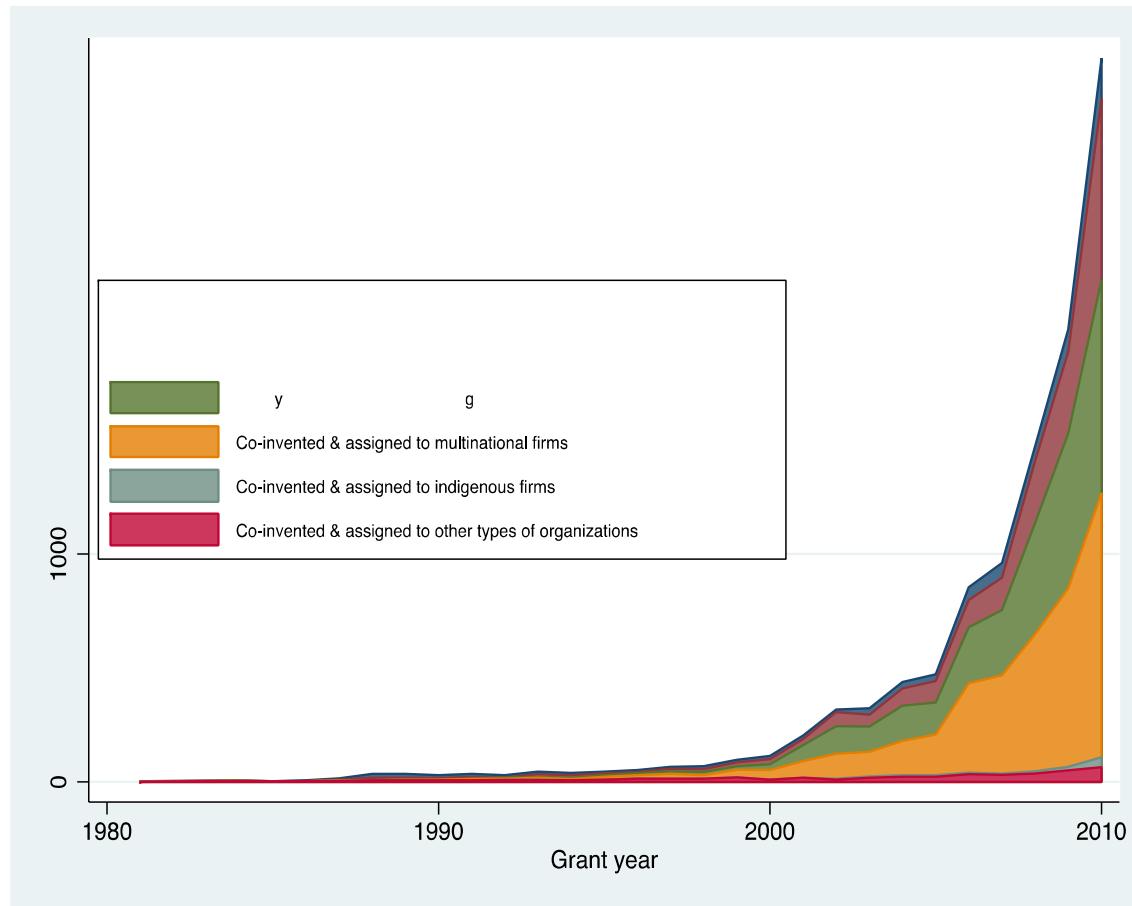

## Export Quality Growth and Risk

# So, China: Waste or Wisdom?

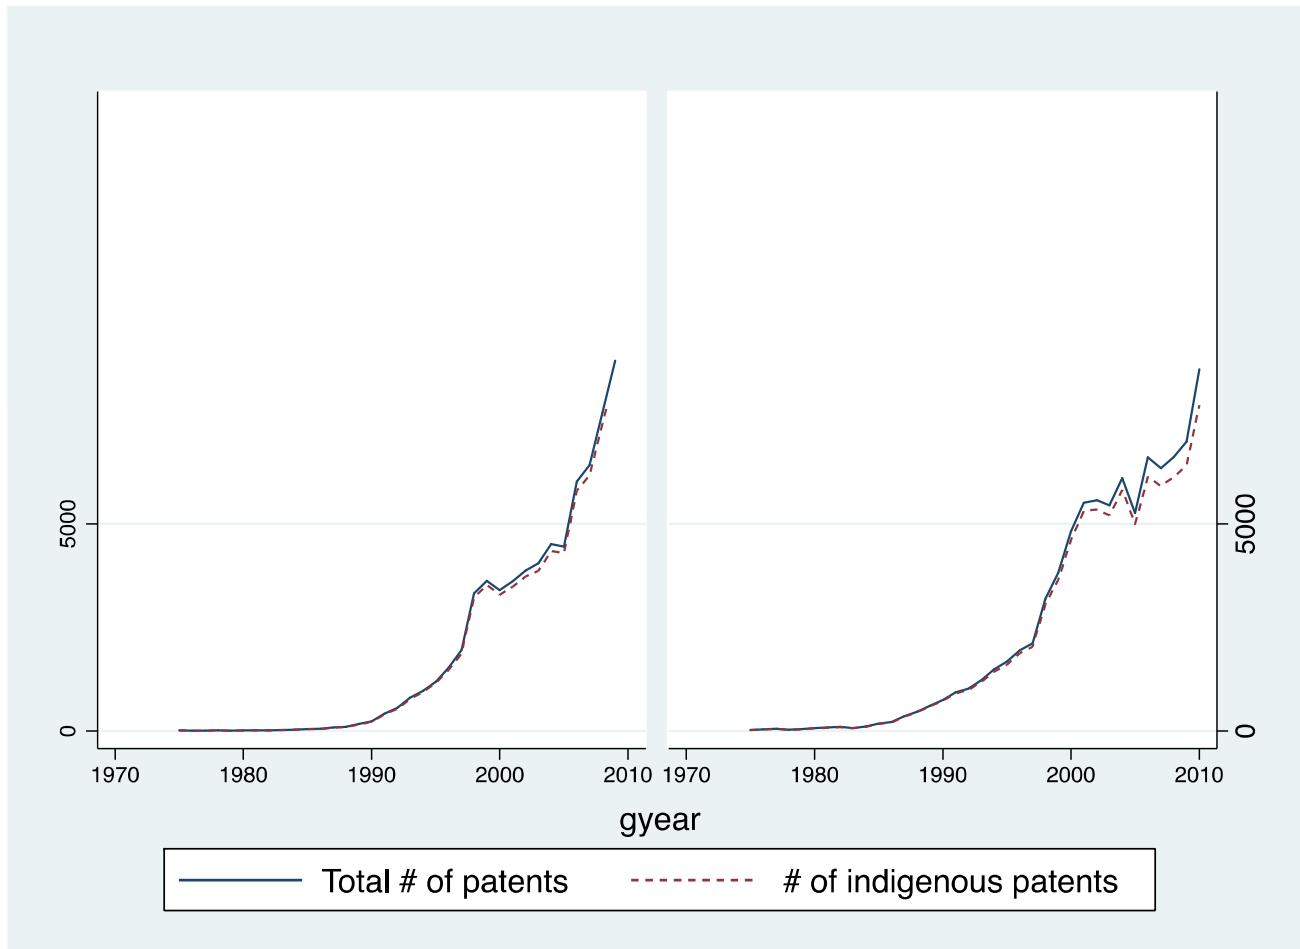

# Who's doing R&D? Patents granted by the USPTO to inventors based in China

Branstetter 2012

# China differs from Taiwan and Korea in the composition of their innovation surges

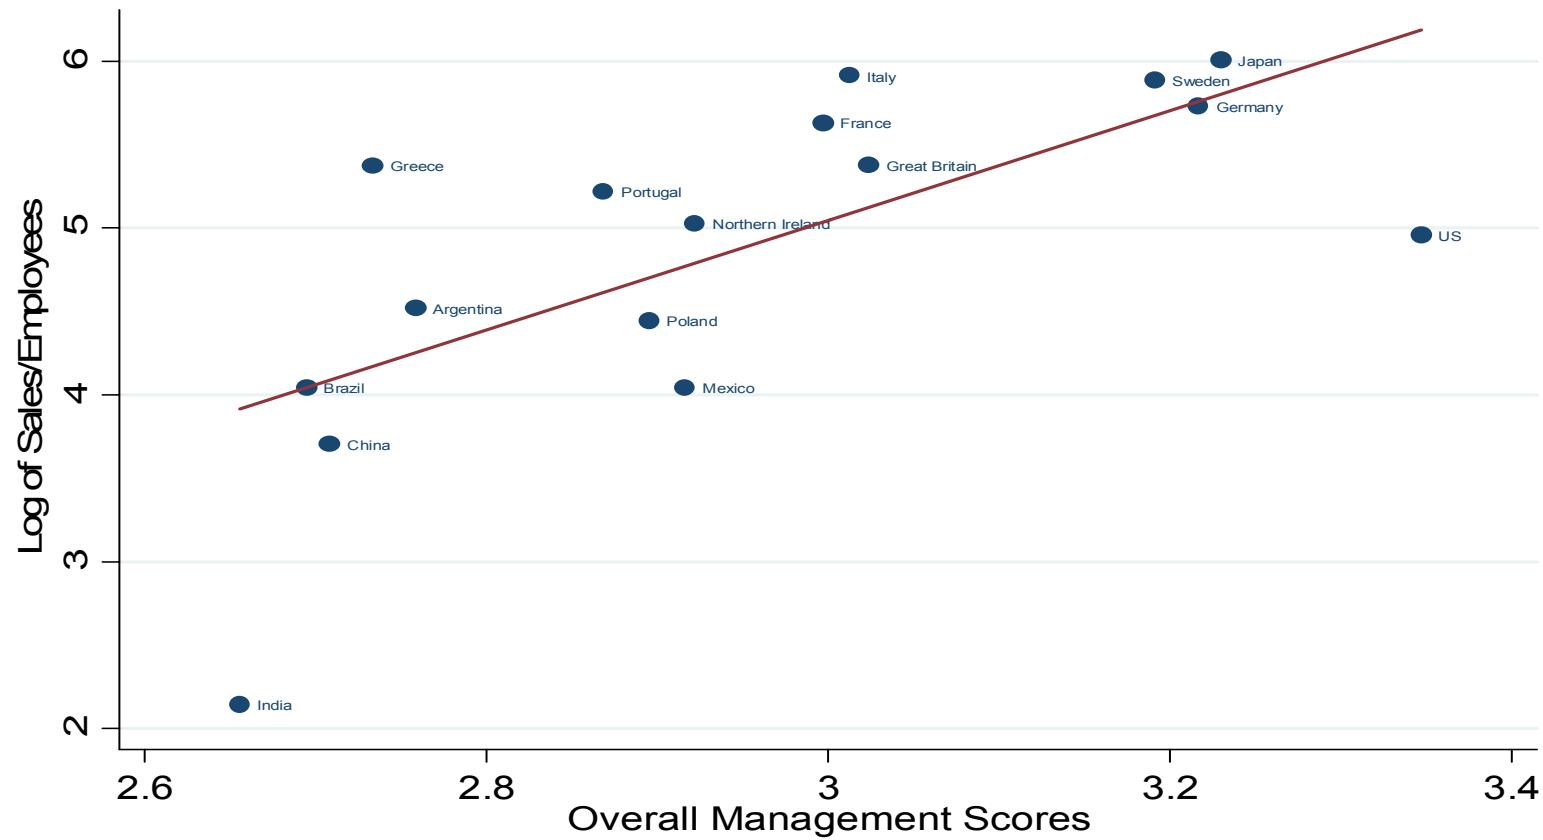

Branstetter (2012)

# Pros and Cons

- MNCs providing eco-system: complementary factors
  - Most patents owned by MNCs
  - 50% are co-patented
- But will it maintain an autonomous innovative capacity?

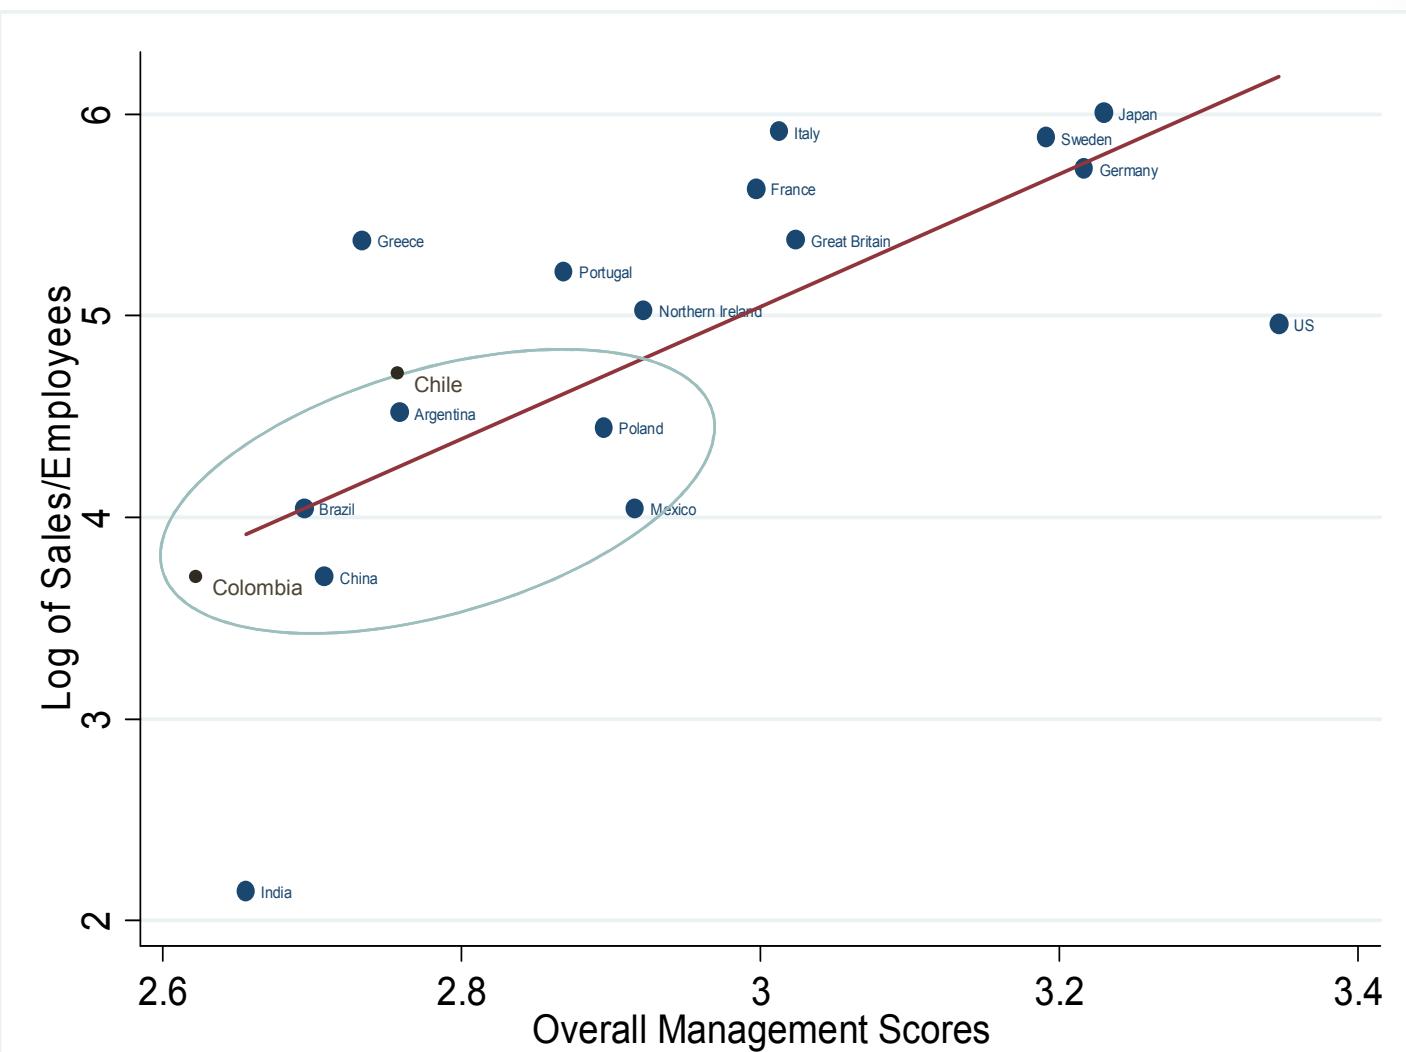

# Management Quality: A Missing Complement?

# Management Quality and Productivity

Bloom and Van Reenen (2010) Sarrias and Maloney (2013)

# Management Quality and Productivity

Fuente: Bloom et al. 2010+LAC, Sarrias and Maloney (2013)

# China: Unprepared for indigenous Innovation

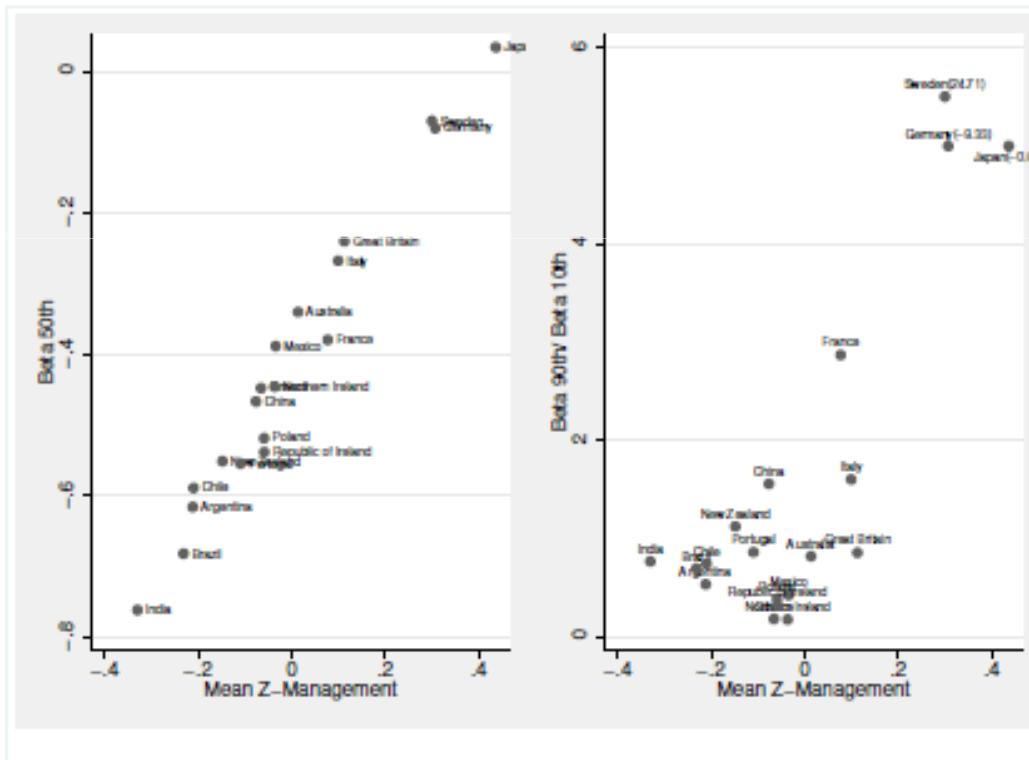

Table 2: China's Relative Ranking on Management scores

		Mean all countries	China's Value	Rank (of 21 countries)
Management	Average of all management questions	2.9391	2.8757	14
	<b>Subcomponents</b>			
Operations	Average of O1 & O2	2.8812	2.6006	17
Monitor	Average of M1 to M5	3.2298	3.1318	11
Target	Average T6 to T10	2.9001	2.8459	14
People	Average of P1 to P6	2.7485	2.7794	10
	<b>Sub-subcomponents</b>			
O1	Introduction to Lean (Modern) Manufacturing	2.8464	2.5917	16
O2	Rationale for Lean (Modern) Manufacturing	2.9161	2.6095	17
M1	Process Documentation	3.1904	2.9588	16
M2	Performance Tracking	3.3595	3.3941	8
M3	Performance Review	3.3236	3.4647	6
M4	Performance Dialogue	3.1674	2.9647	18
M5	Consequence Management	3.1082	2.8765	19
T1	Type of Targets	2.9063	2.5706	19
T2	Interconnection of Goals	3.0623	3.0882	9
T3	Time Horizon	2.8714	2.6294	17
T4	Goals are Stretching	2.9744	2.7588	17
T5	Clarity of Goals and Measurement	2.6862	3.1824	1
P1	Instilling a Talent Mindset	2.4244	2.5647	7
P2	Building a High-Performance Culture	2.5484	3.0765	2
P3	Making Room for Talent	3.0080	2.8765	14
P4	Developing Talent	2.9888	2.7353	17
P5	Creating a Distinctive EVP	3.0270	2.9941	13
P6	Retaining Talent	2.4948	2.4294	11

# Convergence to the management frontier-not just more competition

Figure 5: Change in distributions relative to the frontier with convergence: Quantile coefficients relative to the frontier (US) vs Mean Z-Score

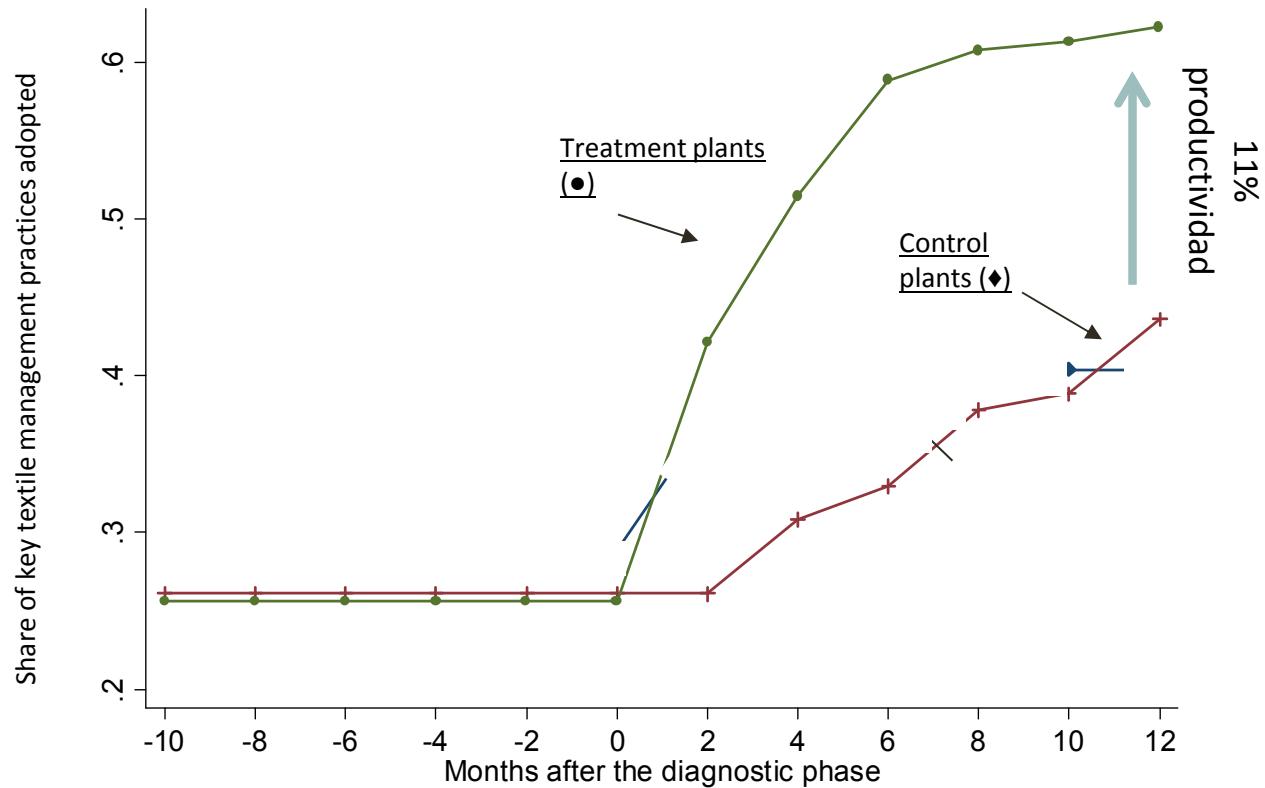

Note: First line: Plot of coefficient on country dummies at the 50th quantile (median) of management score on constant and country dummy vs. mean management score. 2. Plot of 90th coefficient over 10th. Second line, the same, but after conditioning for all available covariates.

Source: Maloney and Sarrias 2013

# Direct interventions in management quality?

- Japan, Korea, Singapore: All employed management promotion programs for SMEs
  - Korea: The Small and Medium Industries Promotion program
  - Singapore: Local Industry Upgrading Program (LIUP)
  - India
  - Colombia
- Lays the foundation for progressively more adoption and invention of new technologies.

# India-Successful Management Intervention

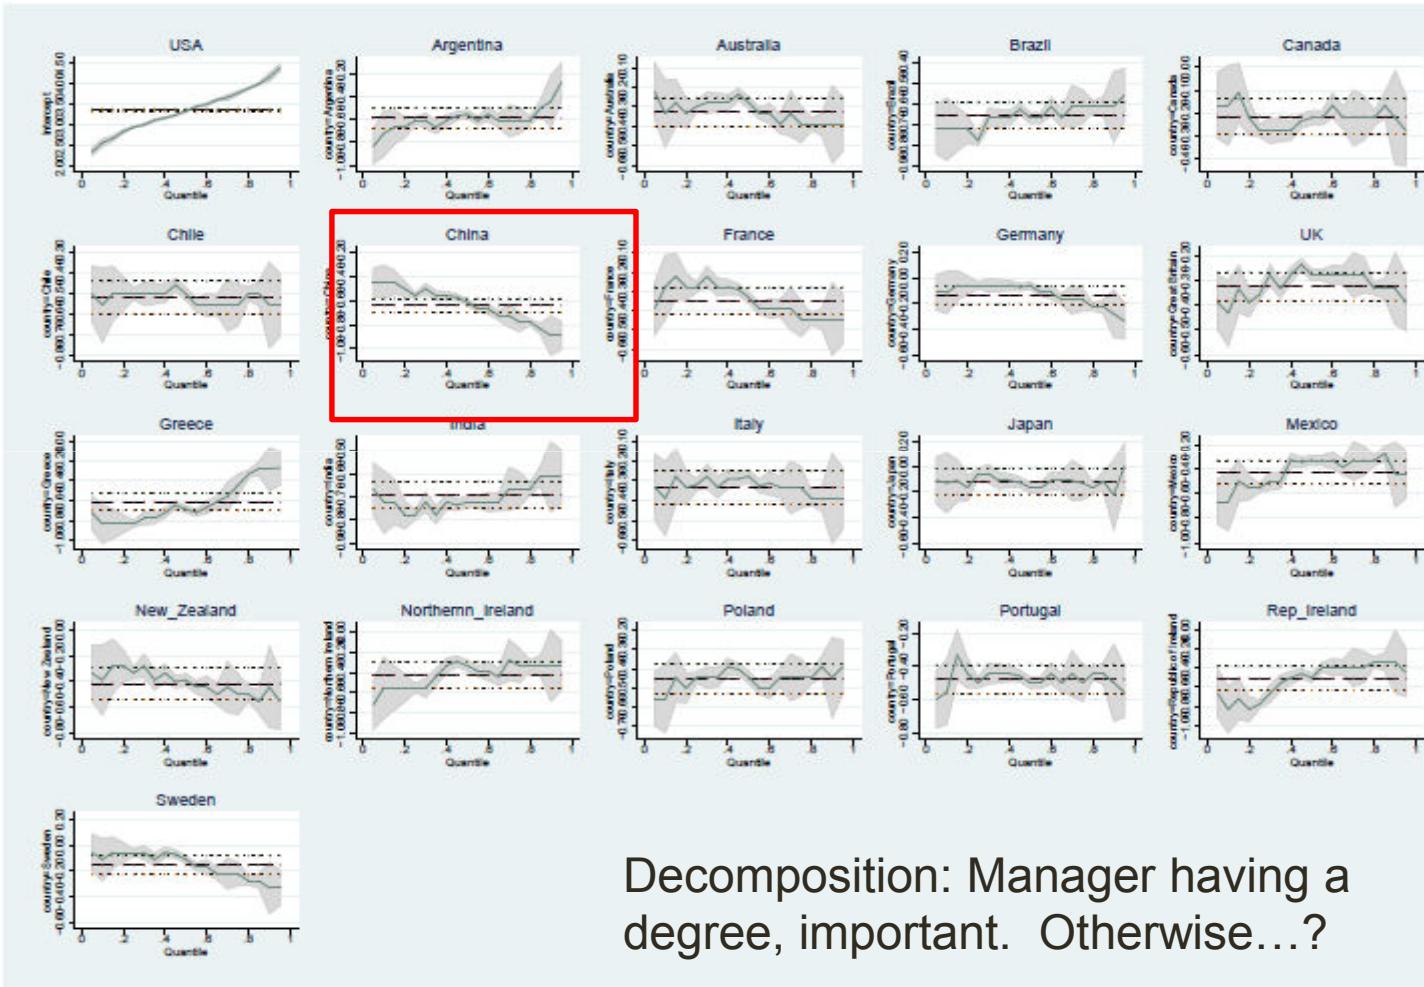

Source: Bloom, et al 2013

# Colombia

- Technological Extension pilot-Autoparts
- RCT 180 firms
  - Individual company intervention
  - Group intervention- Lower cost, more dynamism?
- Current plans to scale up to whole sector

Thank You

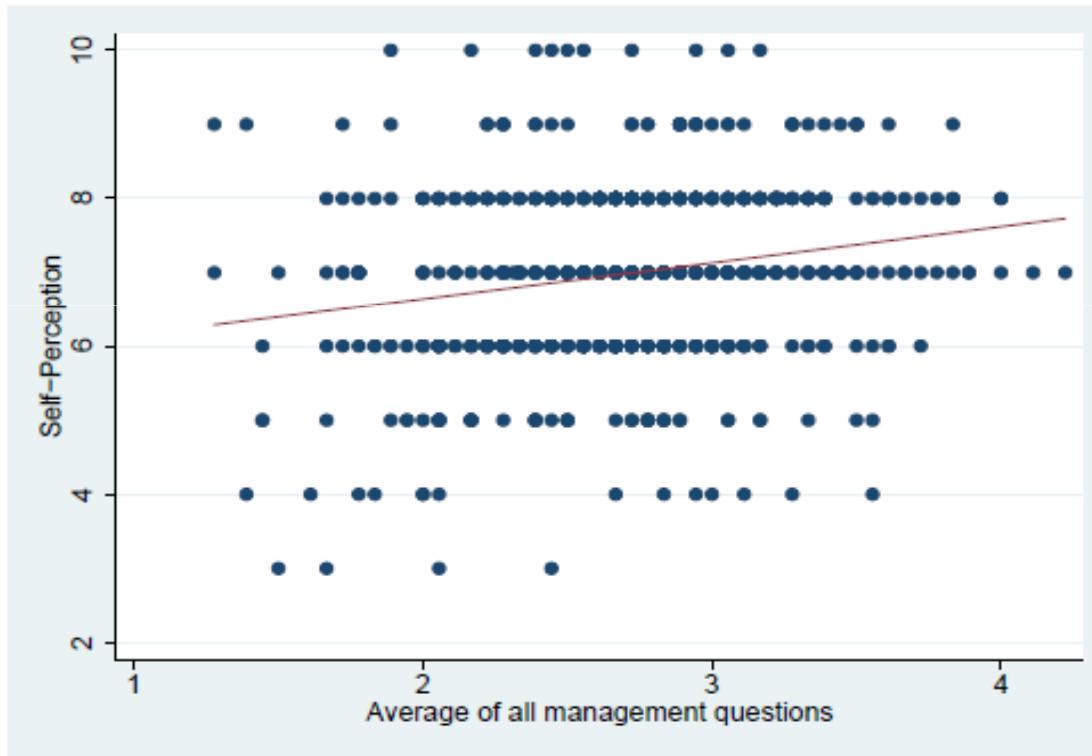

# Distribution relative to the US
